(I) is used to deliver genes to human cells or primate cells that express the hCAT1 amino acid transporter, such as endothelial. Cells that express the hCAT1 amino acid transporter, such as endothelial. Cells retrover are especially useful for providing local applications of cadenoviral vector to patients with restenssis following balloon cells. The vector to patients with restensis following balloon cells. (I) may also be used to be transduced with ceNOS cells. For example. (I) may also be used to pseudotype recombinant type Cells. (I) may be used in functional genomics where transduction of as many cell types as possible is required. The new gene delivery vehicles transduced to a wildtype adenoviral vector. This increased specificity results in lower multiplicities of infection which can occur with prior cells with the cells in lower multiplicities of infection which can occur with prior cart vectors, so preventing tissue toxicity. In addition the new vectors allow DNA to be transduced into cells that are in low abundance in cell mixtures and tissues, which increases their efficiency for use as gene therapy vehicles. The alteration of the ligand on the viral envelope increases the potential host cell range of these vehicles. The present correspond reportion.

The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be associated with aberrant ELyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CYID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This invention describes novel antibodies that immunospecifically bind to Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TWF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 1; Page 1014-1015; 3148pp; English

The method is useful for the target delivery of substances to cells e.g. gene therapy. A human cationic amino acid transporter (hcarl) targeted adenovirus is useful for local applications of adenoviral vector e.g. in patients with restences following balloon angioplasty where smooth muscle cells need to be transduced with an adenoviral vector carrying the CeNOS cDNA. More efficient transduction of tissues can be carried out therefore resulting in lower multiplicity's of infections that can be used and therefore less vector associated toxicity to the tissues surrounding the target cells. AAZ38737 to AAZ38770, and AAY56264 to AAY56287 represent sequences used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   gene delivery; virus-like particle; retroviral envelope molecule;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides a neuromodulatory agent (I) capable of promoting CC neurite outgrowth, regeneration, remyelination and neuroprotection in CC central nervous system (CNS). (I) is capable of inducing remyelination, CC promoting cellular proliferation of glial cells, and promoting C22.

CC signaling with oligodendrocytes. An humanised antibody to (I) can be selected from antibody sHIGM22 (LVM 22), ebvHigM MSI19D10, ebv HigM CC CB2bGB, AKM44, CB21812, CB2187 or MSI19R5. (I) is useful for stimulating CC CNS axons, or treating demyelinating proliferation of glial cells in CC CNS axons, or treating demyelinating proliferation of glial cells in CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS in a mammal in need CC of such therapy. (I) is capable of binding to structures and cells within CC CNS. (I) is preferably useful for treating a demyelinating disease of CNS (CC CNS.) or of treating a human being having multiple sclerosis, or a post-curval disease of CNS. (I) is also useful for stimulating the proliferation of glial cells from mixed cell culture. (CC condition in a subject. Methods where (I) is administered to a patient condition in a subject. Methods where (I) is administered to a patient condition in a subject. Methods where (I) is administered to a patient condition of disease, and other conditions in the CNS where nerves are damaged as by trauma. The present sequence represents the shigM22 heavy chain variable region clone A amino acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant BLyS expression and activity such as cancer, immune, and activity may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and autoimmune disorders and activity such as cancer, immune, and activity such as cancer.

The heterominibodies have cytostatic, immunostimulatory, antileukaemia and antiproliferative activities. These compounds can be used for diagnosing, preventing and treating malignant cell growth related to malignancies of haematopoietic cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is the left chain of a heterominibody comprising HD70 single-chain FV (scFV) fragment N-terminally linked to human CH1 domain which bears at its Cterminus the human inflammatory cytokine granulocyte/macrophage colony stimulating factor (GM-CSF), plus a hexahistidine sequence for ease of purification. HD70 scFV specifically recognises the human epithelial cell adhesion molecule
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       HD70; single-chain Pv fragment; scPv; antibody; 17-1A antigen; human; EpCAM; epithelial cell adhesion molecule; inflammatory cytokine; IL-2; interleukin-2; Ck-domain; kerner chain constant domain; heterominibody; multifunctional compound; immunoglobulin; cytostatic; immunostimulatory; antileukaemia; diagnosis; prevention; antiproliferative; treatment; malignant; haematopoietic cell; lymphoma;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 melanomas and sarcomas.

The polypeptide chains further comprise, fused to the constant domains at least two (poly) peptides having different receptor or ligand functions, where further at least two of the different (poly) peptides lack an intrinsic affinity for one another and are linked via the constant domains. The heterominibodies have cytostatic, immunostimulatory, antileukaemia and antiproliferative activities. These compounds can be used for diagnosing, preventing and activities. These compounds can be used for diagnosing, preventing and creating malignant cell growth related to malignancies of haematopoistic cells e.g. lymphomas and leukaemias, or to solid tumours e.g. carcinomas,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence is the right chain of a heterominibody comprising HD70 single-chain Fv (scFv) fragment N-terminally linked to the comprising the constant domain of immunoglobulin-kappa light chain) which bears at its C-terminus the human inflammatory cytokine interleukin-2 (IL-2). HD70 scFv specifically recognises the human epithelial cell adhesion molecule (EpCAM) also called 17-1A antigen.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Neuromodulatory; central nervous system; CNS; sHIgM22; LYM 22; AKJR4; ebvHigM MsI19D10; ebv HigM CB2bG8; CB2iE12; CB2iE7; MSI19E5; virucide antiparkinsonian; neuroprotective; nootropic; vulnerary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cells e.g. lymphomas and leukaemias, or to solid tumours e.g. melanomas and sarcomas.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                protein comprises an additional domain positioned N-terminal of the BSD and an amino acid sequence that mediates anchoring of the fusion protein to the surface of the display system; and (b) identifying a BSD that binds to the predetermined epitope. The method is useful to identify bior multivalent polypeptides that comprise antibody binding sites capable of efficiently bindings to the corresponding antigen. The polypeptides or antibodies identified by the method are useful therapeutically and diagnostically, for e.g. cancer and autoimmune diseases. ScPv-antibody fragments that bind independently of their position within bifunctional single-chain fusion proteins can be isolated from combinatorial antibody libraries using the new in vitro method.
This is the amino acid sequence of the human D4.5 heavy chain variable region, used in the method of the invention. for providing receptors that can be used for targeting antigens in humans without being immunogenic themselves. Such receptors can be used for treating

The patent discloses heterominibodies which are multifunctional compounds produceable in a mammalian host cell as a secretable and fully functional heterodimer of two polypeptide chains, where one of the polypeptide chains comprises, a CHI-domain (constant domain of an immunoglobulin heavy chain) and the other chain comprises CI-domain (constant domain of an immunoglobulin light chain). The polypeptide chains further comprise, fused to the constant domains at least two (poly) peptides having different receptor or ligand functions, where further at least two of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HD70; single-chain variable fragment; scFv; 17-1A antigen; human; EpCAM; epithelial cell adhesion molecule; inflammatory cytokine; GM-CSF; granulocyte/macrophage colony stimulating factor; heterominibody; CHI-domain; multifunctional compound; heavy chain constant domain; immunoglobulin; cytostatic; immunostimulatory; antileukaemia; diagnosis; antiproliferative; prevention; treatment; malignant; haematopoietic cell; lymphoma; leukaemia; solid tumour; carcinoma; melanoma; sarcoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           diseases such as tumours or auto-immune diseases, graft rejection after transplantation, infectious diseases by targeting cellular receptors as well as allergic, inflammatory, endocrine and degenerative diseases by targeting key molecules involved in the
                                                                                                                                                                                                                                                                                                                                New multifunctional compounds useful for preventing and/or treating malignant cell growth and for detection and diagnosis \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2000-195265/17.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                gene (AA760369) obtained by panning a phage antibody library produced from cloned germline V genes and synthetic CDRs. The antigen-
binding domains of human antibodies (see AAW15522-40) to TGF beta-1 and/or beta-2 can be used to counter the adverse effects of TGF beta, such as (i) promotion of fibrosis (in dermal, ocular or keloid scarring, lung fibrosis, arterial injury, proliferative retinopathy, retinal detachment, adult respiratory distress syndrome, liver cirrhosis, post myocardial infarction, post-
c angioplasty restenosis, scleroderma, vascular disorders, cataract, glaucoma, or esp. neural scarring and glomerulonephritis, also (not claimed) osteoporosis), or (ii) immune and inflammatory diseases (e.g. rheumatoid arthritis, macrophage deficiency diseases or macrophage pathogen infection). Nucleic acids encoding human antibody VH and VL can be used for prodn. of recombinant antigenbinding domains. These are highly specific, have low dissociation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to a method of identifying binding site domains (BSD) that retain the capacity of binding to a predetermined epitope when positioned C-terminal of at least one further domain in a recombinant bior multivalent polypeptide. The method comprises (a) testing a panel of BSD displayed on the surface of a biological display system as part of a fusion protein for binding to a predetermined epitope, where the fusion
                                                                                                                                                                                                    Disclosure;

                                                                                                                                                                                                                                                                                                                                                                                                                                                         cytostatic, immunosuppressive, immunostimulant, immunomodulatory, antirheumatic and antiAIDS activity and can be used in vaccines to inhibit the expression and activity of BLyS. The antibodies bind to BLyS and so may be used to detect and quantitate the presence of BLyS in biological samples and may be used in this way to diagnose disease associated with aberrant expression of BLyS. They may also be administered to treat diseases associated with aberrant BLyS expression and activity such as cancer, immune, and autoimmune disorders and diseases, e.g. systemic lupus erythematosus, rheumatoid arthritis, immunodeficiency (e.g. common variable immunodeficiency (CVID) and acquired immunodeficiency syndrome (AIDS)). ABP43990-ABP47228 represent the antibodies and fragments of the antibodies described in the method
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              BLys; B lymphocyte stimulator; TNF superfamily; human; cytostatic; tumour necrosis factor; B cell proliferation; B cell differentiation; immunosuppressive; immunostimulant; immunomodulatory; antirheumatic; antiAIDS; vaccine; cancer; immune; autoimmune disorder; immunodeficiency; systemic lupus erythematosus; rheumatoid arthritis; CVID; AIDS; common variable immunodeficiency; acquired immunodeficiency syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the tumour necrosis factor (TNF) super family and induces B cell proliferation and differentiation. The antibodies of the invention have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        This invention describes novel antibodies that immunospecifically bind to B Lymphocyte Stimulator (BLyS) polypeptides. BLyS is a member of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Antibodies against B Lymphocyte Stimulating polypeptides, useful for the diagnosis and treatment of cancers and immune disorders -
                                                                                                                                                                                                                                                                                                                                                                        Sequence

                                                         The invention provides a neuromodulatory agent (I) capable of promoting CC neurite outgrowth, regeneration, remyelination and neuroprotection in CC central nervous system (CNS). (I) is capable of inducing remyelination, CC promoting cellular proliferation of glial cells, and promoting Callar proliferation of glial cells, and promoting Callar collidary proliferation of glial cells, and promoting Callar collidary (CB2DGS, AKJR4, CB21E12, CB2IS2), ebvHigM MSIJD10, ebv HigM CC CB2DGS, AKJR4, CB21E12, CB2IS7 or MSIJDE5 (I) is useful for stimulating collidaring disease of CNS. (I) is preferably useful for treating a demyelinating disease of CNS. (I) is preferably useful for treating a demyelinating disease of CNS. (I) is preferably useful for treating a numan being having multiple sclerosis, or a collidaring the proliferation of solutions multiple sclerosis, or a post-collidaring the proliferation of glial cells from mixed cell culture. (I) is also useful for stimulating remyelination of CNS axons. The condition in a subject. Methods where (I) is administered to a patient condition in a subject. Methods where (I) is administered to a patient condition in that causes demyelinating infection by a bacterium, virus or conditions in the CNS where nerves are damaged as by trauma. The present sequence represents conditions in the CNS where nerves are damaged as by trauma. The present sequence represents conditions in the CNS conditions conditions in t
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁

(I) is useful a primer or probe i presence of inhibitory antibodies directed against fac polypeptides of the invention and the antibodies generate useful in compositions for neutralizing factor VII antibodies in hemophilia A patients. This sequence refactor VIII antibody A3-C1 specific scFv protein B35 win the method of the invention.

                                                                                                                                                                                                                                                                                                                        This invention describes novel recombinant anti-human TNF-alpha human monoclonal antibody consisting of a heavy (H) chain and a light (L) chain. The recombinant anti-human TNF-alpha human monoclonal antibody can be produced stably in a high purity and in a large amount.
